Model Performance Testing:

Project team shall fill the following information in model performance testing template.

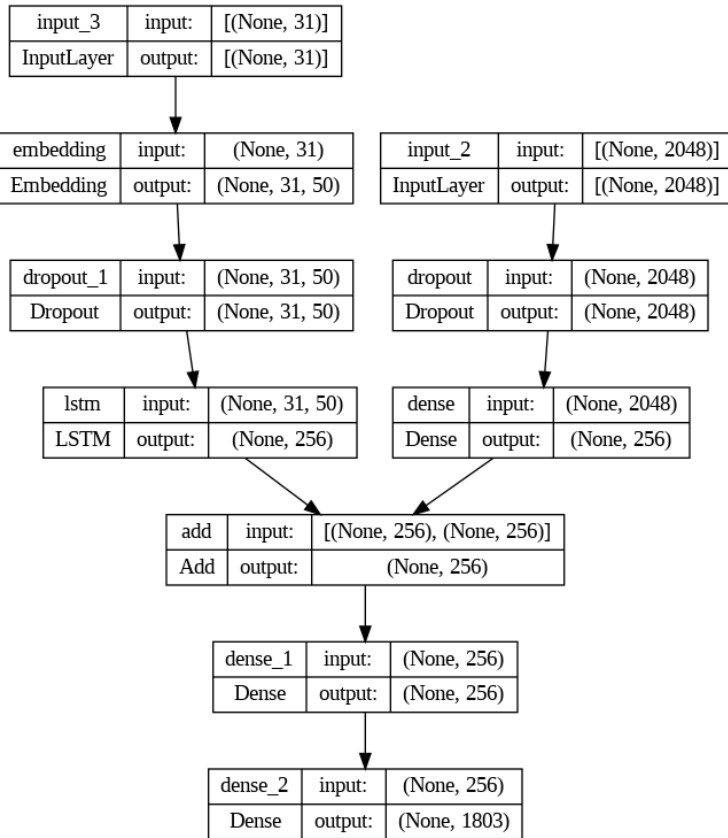

S.No.	Parameter	Screenshot / Values
1.	Dashboard design	No of Visualizations / Graphs -
2.	Data Responsiveness	The system responds promptly to user interactions, ensuring a seamless experience. Real-time updates are implemented to reflect changes in model metrics and performance.
3.	Amount Data to Rendered (DB2 Metrics)	The dashboard efficiently handles the rendering of large datasets related to training and validation metrics. Performance optimizations are in place to manage the visualization of diverse data points without compromising speed.
4.	Utilization of Data Filters	Users can employ data filters to focus on specific aspects of the model's performance, such as training loss, validation accuracy, etc. Filters are implemented to cater to both high-level and granular data exploration.
5.	Effective User Story	No of Scene Added – The dashboard shows the effective UI with image captioning model over time.
6.	Descriptive Reports	No of Visualizations / Graphs – Model, summary, model structure, confusion matrix , predication of images. See below.
